

# How To Build POI

by Glen Stampoultzis, Tetsuya Kitahata

## 1. JDK

POI 3.5 and later requires the JDK version 1.5 or later. Versions prior to 3.5 require JDK 1.4+

## 2. Installing Ant

The POI build system requires two components to perform a build. [Ant](#) and [forrest](#).

Specifically the build has been tested to work with Ant version 1.5.3 and Forrest 0.4. To install these products download the distributions and follow the instructions in their documentation. Make sure you don't forget to set the environment variables FORREST\_HOME and ANT\_HOME. The ANT\_HOME/bin directory should be in the path.

One these products are installed you will also need to download some extra jar files required by the build.

Library	Location
junit	<a href="http://www.ibiblio.org/maven/junit/jars/">http://www.ibiblio.org/maven/junit/jars/</a>
xerces	<a href="http://www.ibiblio.org/maven/xerces/jars/">http://www.ibiblio.org/maven/xerces/jars/</a>
jdepend	<a href="http://www.ibiblio.org/maven/jdepend/jars/">http://www.ibiblio.org/maven/jdepend/jars/</a>
xalan	<a href="http://www.ibiblio.org/maven/xalan/jars/">http://www.ibiblio.org/maven/xalan/jars/</a>

Just pick the latest versions of these jars and place them in ANT\_HOME/lib and make sure that optional.jar is in ANT\_HOME/lib .

## 3. Running the Build

On the first run the ant build system will download all the jars required by the project to build ant. If you're behind a firewall this may cause some problems. Should you need to it's possible to manually put the jars in the correct directories. These can be obtained from here:

JAR	Location
-----	----------

/commons-logging/jars/commons-logging-1.0.1.jar	lib
/log4j/jars/log4j-1.2.8.jar	lib
/commons-beanutils/jars/commons-beanutils-1.6.jar	src/contrib/lib
/commons-collections/jars/commons-collections-2.1.jar	src/contrib/lib
/commons-lang/jars/commons-lang-1.0-b1.jar	src/contrib/lib
/junit/jars/junit-3.8.1.jar	lib
/dom4j/jars/dom4j-1.6.1.jar	ooxml-lib
/org.apache.xmlbeans/jars/xmlbeans-2.3.0.jar	ooxml-lib
/xmlbeans/jars/jsr173_1.0_api.jar	ooxml-lib
/org.apache.poi/jars/ooxml-schemas-1.0.jar	ooxml-lib

The main targets of interest to our users are:

Target	Description
clean	Erase all build work products (ie, everything in the build directory)
compile	Compiles all files from main, contrib and scratchpad
test	Run all unit tests from main, contrib and scratchpad
docs	Generate all documentation for the system
generate-records	Generate records from the XML record definitions
generate-types	Generate types from the XML type definitions (this is for HWPF).
jar	Produce jar files
dist	Create a distribution.
clean-dist	Runs clean before creating the distribution.
